Re: Proposal for Development of Parallel Mobility Device

To whom it may concern,

The following report addresses the value proposition that there exists an interest for a device that enables people with mobility impairments to actively participate in social outings to explore unpaved terrain in semi-urban parks. This has been prepared for the British Columbia Mobility Opportunities Society (BCMOS) in response to a request for the exploration and preliminary development of a conceptual evolution of the current trail rider product offering. The enclosed report details the first stages towards the process of offering a parallel offering to the trail rider. All supporting calculations herein were confirmed by a second member in addition to the primary engineer.

Yours sincerely,

Andrea Escoto 53587333
Carson Hopkins 17042169
Julia Zhuravleva 37087160
